

INTRODUCTION

The purpose of this catalogue is to promote the offer of technological capacities with regards to Metal Additive Manufacturing (MAM) for the aerospace sector in the SUDOE area. This catalogue was created as part of the ADDISPACE project, jointly funded by the European Regional Development Fund (ERDF) in the framework of the Interreg SUDOE programme. The catalogue is also available on the website.

ADDISPACE was created with the aim of promoting additive manufacturing technologies as a change to the manufacturing model in the aerospace sector and as an opportunity for SMEs within the sector. It also aims to show the technological and economic viability, as well as the high levels of quality of the metal parts built using additive manufacturing technologies.

In addition, it is aimed at promoting the opportunities for specialisation provided by the additive manufacturing sector in the labour market, as well as new professional profiles, skills and the need for adapted training options so that SUDOE can take advantage of this opportunity.

The project, in which companies and institutions from Spain, France and Portugal are participating, began on 1 July 2016 and will run for 3 years. It has a budget of 1.77 million euros, 1.33 million euros of which will be funded by the European Regional Development Fund (ERDF).

Those participating in the project as partners are: the Institute of Advanced Industrial Technologies (ESTIA), IK4-LORTEK, the Advanced Center for Aerospace Technologies (FADA-CATEC), ADDIMAT, the Spanish Association of Additive Manufacturing Technologies and 3D (operated by AFM), the Polytechnic Institute of Leiria, AED Portugal, VLM Robotics, MICRONORMA and GNC Laser. And as associates: the DON BOSCO Professional Training Centre, the Helice Foundation, EADS CASA, the Basque Aeronautics and Space Cluster Association (HEGAN), Aerospace Valley, ADIRA Metal Forming Solutions, CENTIMFE and the Mould Technology Institute, A.C.E (IBEROMOLDES).

If you would like to receive the latest information and stay up-to-date regarding the future results of the project, please subscribe to our newsletter on the project website www.addispace.eu

An abstract graphic featuring a series of concentric circles and a network of dots connected by lines, resembling a complex web or a stylized atomic model. The circles are light blue and the dots are dark blue. The lines connecting the dots are thin and light blue, creating a dense, interconnected pattern. The word "INDEX" is centered within the circles.

ACTIVITY DESCRIPTION

ADDIMEN is a company established in May of 2014 that focuses its activity in the design and manufacture of functional metal components for various sectors by means of additive manufacturing. ADDIMEN is committed to providing its customers with premium quality products, in time, at a competitive price, and in strict compliance to the specification.

Polígono Industrial de Itziar, Nave A-3
20820 Deba (Gipuzkoa)
SPAIN

www.gnclaser.es
gnclaser@gnclaser.es

Basque Country

ACTIVITY DESCRIPTION

Established in 2007 and headquartered in Itziar, Gipuzkoa, GNC Láser offers hardening, welding and additive manufacturing services based on laser technology. Furthermore, it can provide integrated laser cells and laser-welded assemblies. It has an experienced team with the required know-how to provide solutions to complex geometries in a very wide range of materials.

I3D CONCEPT

ZA de l'Escudier

contact@lisi-aerospace-am.com

Aquitaine

ACTIVITY DESCRIPTION

LAAM has a high innovation culture and industrial excellence dedicated to additive layer manufacturing in aeronautic, space and defence market. We are able to carry your project from initial design up to a finished part, with the requested quality level. Several additive technologies are available (LBM /EBM /SLS) for various raw material (aluminium, inconel, titanium& stainless steel). All major manufacturing steps are processed in house in order to deal with your serial production and prototype applications.

MICRONORMA, S.A.

Centro Empresarial Sintra- Estoril VI
Armazém A - Linhó 2710-297 Sintra
PORTUGAL

www.micronorma.com
tatiana.loio@micronorma.pt

Lisbon Region

ACTIVITY DESCRIPTION

Micronorma integrates the Tecnisata Industrial Group with 3 other companies. It develops customer tailored turnkey solutions in mechanical engineering, automation and metalworking products, with a large range of materials from metals to polymers. Besides Milling, Turning Machining Centers and WEDM Centers, Micronorma also supplies surface grinding and cylindrical grinding.

Micronorma took part in IMPALA R&D project - "Intelligent Manufacture from Powder by Advanced Laser Assimilation", with the aim to develop

manufacturing processes based in laser additive manufacturing of metallic and ceramic powder.

Regarding MAM, Micronorma still only works with polymer, but thanks to IMPALA and ADDISPACE projects the manufacturing of metal parts is also envisaged.

Micronorma doesn't have direct experience in the aerospace sector, but we can capitalize the knowledge and experience that Tecnisata, a company member of the same Group has.

MIZAR ADDITIVE SPAIN

Parque Tecnológico de Álava

01510 Miñano (Álava)
SPAIN

www.mizaradditive.com
info@mizaradditive.com

Basque Country

ACTIVITY DESCRIPTION

Mizar Additive Manufacturing is a company leader in additive manufacturing. Because of its constant focus on R&D, its advanced equipment and qualified professionals, Mizar offers a service specialised on the design and production of all types of personalised components.

With offices in Álava (Spain) and Toulouse (France), Mizar's technology includes Electron Beam Melting (EBM), Direct Metal Laser Sintering (DMLS-LS), Fused Deposition Modeling and Material Jetting or Polyjet. Its additive technology applies specially to the

aerospace sector (assembly tools and verification, testing prototypes, final parts..) and the medical sector (custom-made implants, personalized anatomical models...), as well as the rest of the industrial sector.

SPAIN

www.verot.com
aditiva@verot.com

Asturias

ACTIVITY DESCRIPTION

VEROT, S.A. offers metal transformation services and 3D printing by metal additive manufacturing. VEROT, S.A. uses leading manufacturers machinery in 2D, 3D laser cutting and laser tube, water jet cutting, plasma, folding, punching and welding (robotic, laser and manual). They are also a reference in metal transformation and the development / manufacturing of specific transport racks.

Intended for high technology sectors and complex parts they have their most current bet, the additive manufacture in metal 3D printing.

VEROT, S.A. provides part for high technology sectors such as renewable energy, biomedical, automobile, machinery manufacturing, nuclear, railway, aerospace, agricultural and defense-military sectors.

ACTIVITY DESCRIPTION

COMPANY:

Atlântica was created in 1996 as an institution of public interest, which sought to be a reference oriented to the creation, transmission and diffusion of knowledge, science and technology through the articulation of study, teaching, research and experimental development. Managed by EIA - Teaching, Research and Administration SA, was based on university professors, researchers, financial institutions, institutional groups, service and studies companies, and the Municipality of Oeiras, which until 2014 remained

the main shareholder. In 2014, the company Carbures acquired 87% of the capital stock of EIA, expressing its intention to contribute to a change in higher education in Portugal, by fostering the link between industry - higher education university - research, materialized through the creation of a technological pole of development in the field of materials engineering and aeronautical engineering sciences that its core business. Through this collaboration and new teaching model, Atlântica marks the difference in higher education in Portugal, private and public.

COMPETENCIES:

Creation, transmission and diffusion of knowledge, science and technology through the articulation of study, teaching, research and experimental development.

Azkue auzoa 1
20870 Elgoibar (Gipuzkoa)
SPAIN

www.imh.eus/es
imh@imh.eus

Basque Country

ACTIVITY DESCRIPTION

The IMH is a center for training and technological innovation at the service of companies and individuals, whose activity is focused on the needs of the machine tool builders and users to enface to changes in the industrial sector.

The IMH is both a singular training center and a center for innovation service in advanced manufacturing. It has a unit for additive manufacturing composed of the following assets: LMD robot cell with two work tables (1100x700x500); AM plasma robot cell; large format FDM printer

(1000x1000x600) for technical plastics, carbon fiber, fiberglass; 8 FDM desktop printers; scanner dimensional control structured light; DPA photogrammetry system. In addition, it annually organizes specific training in additive manufacturing in different formats: 5 hour workshops for general overview; 30 hour courses for decision-makers (managers, technical office managers, production managers) and machine operators.

TKNIKA

Zamalbide Auzoa s/n

Galicia

**ACTIVITY DESCRIPTION**

AIMEN is a private non-profit association incorporated in Vigo in 1967, on the initiative of a group of business people from Galicia. Currently, as a Centre for Innovation and Technology, we are highly specialised in advanced manufacturing technologies and materials, especially welding and bonding technologies, material processing laser technologies (cutting, surface treatment, cladding and additive manufacturing), robotics and automation.

AIMEN has additive manufacturing equipment, specifically with direct

metal filler technology, both in powder and wire, and it participates in different projects related to this technology.

**ADVANCED CENTER FOR AEROSPACE TECHNOLOGIES (FADA-CATEC)**

C/ Wilbur y Orville Wright 19
41309 La Rinconada, Sevilla
SPAIN

www.catec.aero
materiales@catec.aero

Andalusia

**ACTIVITY DESCRIPTION**

Advanced Center for Aerospace Technologies (FADA-CATEC) is a technology center that carries out its activity on related technologies for aerospace and factory of the future, like materials and processes, avionics and unmanned systems, automation and robotics, etc. In the framework of Materials & Processes, the division features a wide variety of technologies for the development and design of aerospace components for additive manufacturing, including topology optimization for metal and polymer base fabrication technologies (SLM, SLS, FDM, ...).

A second research line comprises non-destructive testing and failure analysis for aircraft components by ultrasonics phased array, infrared thermography and laser shearography. Additionally, high detail 3D characterization can be also performed by means of X-ray computed tomography.

Furthermore, the division have a great potential for mechanical testing of components and structures, involving static and fatigue tests up to 4,000 KN, impact testing, modal analysis, digital image correlation for recording strains and 3D displacements, as

well as altitude and HALT (Highly Accelerated Life Testing) environmental chambers.

CDRSP CENTRE FOR
RAPID AND SUSTAINABLE

CDRSP

Edifício IPL
Rua de Portugal
Zona Industrial 2430-028 – Marinha Grande
PORTUGAL

cdrsp.ipleiria.pt
fabio.simoes@ipleiria.pt

Portugal Center

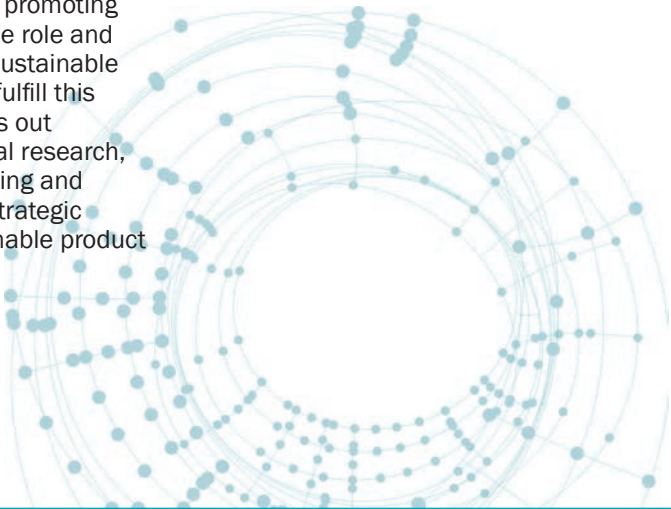

ACTIVITY DESCRIPTION

The Centre for Rapid and Sustainable Product Development (CDRSP) is a research center hosted by the Polytechnic Institute of Leiria (IPLeiria).

CDRSP organization and management are carried out by the coordination board supported by its scientific council and international advisory board, as well as the general assembly. The coordination board includes the director and two vice-directors.

CDRSP aims to contribute to the advanced of science and technology leading to more suitable, effective and efficient products, materials and

processes, this way generating added value for the industry and promoting awareness in society of the role and importance of rapid and sustainable product development. To fulfill this mission, the center carries out scientific and technological research, providing consulting, training and research services in the strategic areas of rapid and sustainable product development.

CEA CESTA

15 avenue des sablières, CS 60001,
33116 Le Barp Cedex
FRANCE

www.cea.fr

Aquitaine

ACTIVITY DESCRIPTION

CEA Tech is a major player in innovation with the mission to produce, adapt and transfer innovative technologies to industrial companies to ensure their competitiveness. Initially turned towards nuclear energy, the CEA has diversified considerably.

CEA Tech has 4,500 employees dedicated to innovate in the service of the industry and develops Key Technologies Generic which have the interest to spread in all the industrial domains and within all types of companies, large groups, ETI, SMEs and start-ups.

CEA Tech has technology platforms covering all of its technologies including Additive Manufacturing (Materials and Processes).

CIDETEC SURFACE ENGINEERING

Parque Científico y Tecnológico de Gipuzkoa
Paseo Miramón 196,
20014 Donostia - San Sebastián
SPAIN

www.cidetec.es
gvara@cidetec.es

Basque Country

ACTIVITY DESCRIPTION

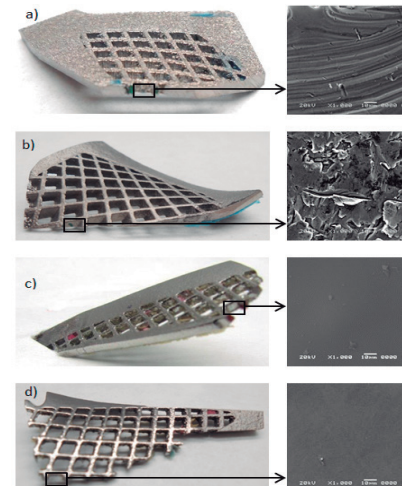

Post-processing of MAM components by chemical, electrochemical and/or mechanical processes.

CIDETEC has laboratory scale and semi-industrial scale facilities to provide MAM components with the required quality and or functionalities: Surface roughness reduction, high brightness, stress relieve, improvement of fatigue behaviour, improvement of corrosion behaviour, etc.

For this purpose CIDETEC works on the next subjects: The optimization of post processing parameters at laboratory scale to meet aesthetic and

functional properties, definition of up-scaling parameters for the chemical, electrochemical and/or mechanical treatments to process industrial components produced by MAM technologies, surface characterization (chemical, microstructural, morphological mechanical and corrosion) and validation of the components.

CIDETEC has developed the E-blasting process, a combination between an electrochemical and a mechanical process that produces flat surfaces with high gloss.

RESEARCH AND DEVELOPMENT

ÉCOLE DES MINES ALBI-CARMAUX

Campus Jarlard,
81013 Albi CT Cédex 09
FRANCE

www.mines-albi.fr

Midi-Pyrénées

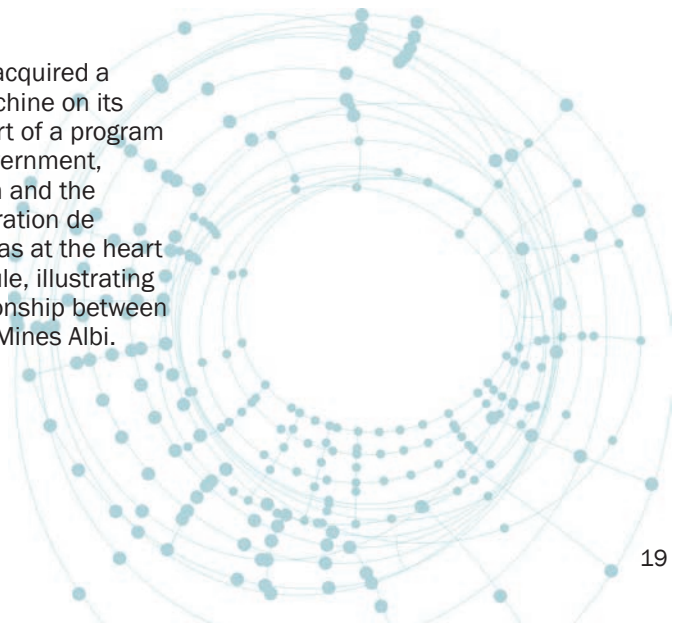

ACTIVITY DESCRIPTION

Since 2011, Albi Mines conducts research on ALM-Metallic on its site "Institut Clément Ader" through partnership projects in the framework of programs AEROSAT / EASYNOV and Institut Carnot M.I.N.E.S.

From January 25 to February 5, 2016, Mines Albi delivered the first training of engineers in the Midi-Pyrenees on Additive Layer Manufacturing (ALM) as part of its option Advanced Materials Engineering and Structures.

This training aims to meet the expectations of regional, national and international companies on ALM.

In July 2015, Mines Albi acquired a laser powder coating machine on its MIMAUSA platform as part of a program funded by the French government, the Midi-Pyrénées Region and the Communauté d'Agglomération de l'Albigeois. This means was at the heart of this new training module, illustrating the strength of the relationship between training and research at Mines Albi.

**EESC ESTIA –
COMPOSITADOUR - ADDIMADOUR**

Parc Technocité Avenue du 8 Mai 1945
64100 Bayonne
FRANCE

compositadour.estia.fr
g.dirassar@estia.fr

Aquitaine

ACTIVITY DESCRIPTION

Located in Bayonne Technocité, ADDIMADOUR is a new research center dedicated to Additive Manufacturing of large size metallic parts. As Compositadour, focused on composite manufacturing processes since 2010, the platform is directed by the ESTIA engineering school. Addimadour aims to transfer large size Metallic Additive Manufacturing technologies to industrial users that are interested in this type of processes. By constantly putting through industrial needs with academic knowledges, Addimadour's activity is based on both large term research projects and short term

feasibility studies. Addimadour is also focused on training designers, operator technicians and future engineers in Additive Manufacturing technologies to meet industrial needs.

ADDIMADOUR platform relies on several equipments:

- BeAM Magic 2.0 machine for large size LMD / Powder parts (1200 x 800 x 800 mm) with inerting system for titanium parts.
- CMT (Fronius Transpulse Synergic 3200) on the Kuka KR100 HA robot.
- SLM (Concept Laser Cusing M2)
- Metallography Laboratory (Sample

Preparation, Microscopy, Image Processing)
- Etc.

RESEARCH AND DEVELOPMENT

CEIT-IK4

Manuel Lardizabal 15
20018 Donostia-San Sebastian
SPAIN

www.ceit.es
iituriza@ceit.es

Basque Country

ACTIVITY DESCRIPTION

Ceit-IK4 is a non-profit research centre. Our primary mission is to develop applied industrial research projects. Our 4 divisions (Materials and Manufacturing, Transport and Energy, Water and Health and Information and Communication Technologies) give us a multidisciplinary approach being able to carry out research projects with a global vision.

Specifically, in the field of AM ceit-IK4 has expertise in the following links of the value chain:

- Atomization of metallic powder for AM. With more than 25 years of

expertise in this field, Ceit-IK4 is able to optimize atomization processes (with water and gas), development of tailor made alloys and design of atomizers.

- Laser Metal Deposition (LMD). Our LMD cell allows us process optimization and prototypes manufacturing.
- Hot Isostatic Pressing (HIP). 30 years of experience in HIP of powders and castings are applied now in the improvement of AM components.

- Laser post-processing. Taking

advantage of laser flexibility, we are using laser technologies for parts heat treatment and surface functionalisation and polishing.

- Design for AM. We develop part selection methods for AM, part design and redesign for AM including topology optimization and create design guidelines for different AM technologies.

IK4-IDEKO

C/ Arriaga 2,
20870 Elgoibar, Gipuzkoa
SPAIN

www.ideko.es

Basque Country

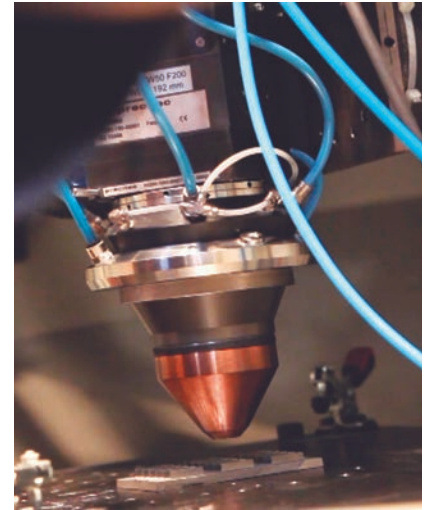

**ACTIVITY DESCRIPTION**

Ideko is a research centre that specialises in industrial production and manufacturing technologies, and integrated into the IK4 Research Alliance.

The activity of Ideko covers the identification and analysis of opportunities, the design and development of products, business lines and production processes and the resolution of problems through the provision of technological services such as technical consultancy and equipment based services.

Ideko is a private research centre with

expertise in LMD. The laboratory has a fiber laser, of 2 kW power, mainly for research in additive processes, particularly oriented to the creation, repair and coating of pieces of high added value, which Ideko understand is a growing industrial niche in strategic sectors as the aeronautical or energetic.

**IK4-LORTEK**

Arranomendi kalea 4A
20240 Ordizia (Gipuzkoa)
SPAIN

www.lortek.es
lortek@lortek.es

Basque Country

**ACTIVITY DESCRIPTION**

IK4-LORTEK is a private non-profit research institute that was set up with a clear commitment of acquiring knowledge and expertise in materials, manufacturing processes and joining technologies for further transferring it to industry. LORTEK is located in a strategic place of the Basque Country surrounded by a robust industrial network. Our efforts are clearly industry oriented, developing integral solutions for manufacturing technologies with high performance materials.

IK4-LORTEK belongs to the IK4

Research Alliance that gathers 9 Research Centres, including 1,400 researchers, which has a strong participation in European projects.

LORTEK has broad expertise in different technologies of Metal Additive Manufacturing (SLM, LMD, WAAM), joining processes with arc and laser technologies, deep knowledge on metallurgy of Ni superalloys, steels, Ti and Al alloys, and wide understanding in characterisation, non-destructive tests, simulation and evaluation and control techniques. The main research done by IK4-LORTEK is applied to

aeronautic, aerospace, automation, medical, tools and moulds, energy and industry sectors among others.

IK4-TEKNIKER

Iñaki Goenaga 5,
20600 Eibar (Gipuzkoa)
SPAIN

www.tekniker.es/es
joseba.pujana@tekniker.es

Basque Country

ACTIVITY DESCRIPTION

IK4-TEKNIKER is a non-profit making Foundation renowned as a centre of Manufacturing Technologies. The preferential sectors covered include Ancillary Automotive sector, Machine-Tool and accessories, Aeronautics and outer space applications, Mechanical capital goods and Moulds and dies.

The experience of the centre in additive manufacturing relies on the Laser Metal Deposition (LMD) process, based on both powder and wire. IK4-Tekniker has developed, for more than 12 years, research projects and scientific papers related to the repair,

reinforcement and manufacturing of structures and components for different industrial sectors. The study of the LMD process is complementary to the development of in situ control techniques and the development of specific LMD equipment (laser heads and machinery).

**CIRIMAT – INP -
ECOLE NATIONALE SUPÉRIEURE

ET TECHNOLOGIQUES**

4, allée Emile Monso - CS 44362
31030 Toulouse - Cedex 4

www.ensiacet.fr/fr/index.html

Midi-Pyrénées

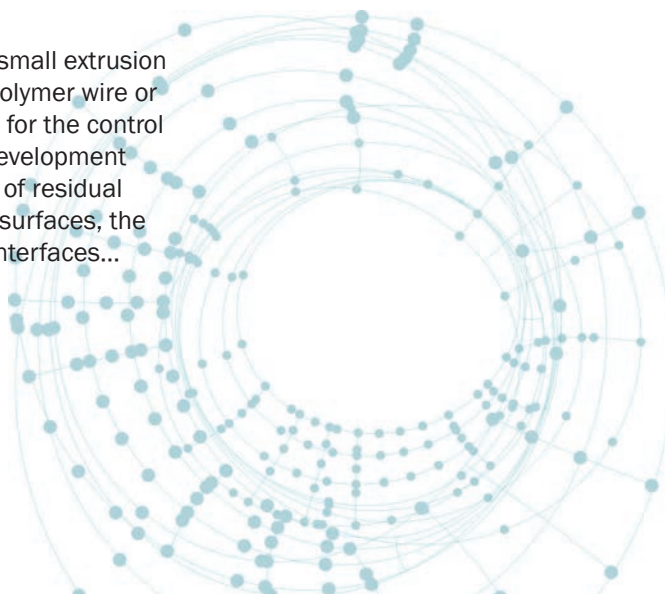

ACTIVITY DESCRIPTION

The development sectors of additive manufacturing for the production of functional parts currently concern health, transport, energy, luxury ... The CIRIMAT, engaged in these fields for many years, is exploring the potential of additive manufacturing to meet new challenges such as personalization of medical devices, lightening of structures, multimaterial assembly ...

Currently equipped with a Powder Bed Laser Sintering / Sintering Machine (SLM / S) from Phenix Systems-3D

Systems (Pro X200) and small extrusion printing machines for a polymer wire or CIRIMAT deploys its skills for the control of microstructures, the development of new alloys, the control of residual stresses, the finishing of surfaces, the control of multimaterial interfaces...

PRODINTEC

Avda. Jardín Botánico, 1345
33203 Gijón (Asturias)
SPAIN

prodintec.es
info@prodintec.com

Asturias

ACTIVITY DESCRIPTION

PRODINTEC is a technology center which has been working on the development of additive manufacturing technologies since 2004. The advanced manufacturing area focuses on AM designs, processes, equipment, production and post-processing.

PRODINTEC possesses in-house cutting-edge AM equipment for manufacturing and advanced software for product design along with high-skilled engineers with experience in different fields of science, from advanced production technologies to production plant management.

PRODINTEC, possesses also strong experience in networking with industrial companies at regional, national and international level. Moreover, the center is an active member of different European Technology Platforms related to manufacturing such as AM-Platform.

REDIT

Avenida Leonardo Da Vinci 48
46980 Paterna (Valencia)
SPAIN

www.redit.es
redit@redit.es

Valencia Region

ACTIVITY DESCRIPTION

The Network of Technology Institutes of Valencia Region (REDIT) is a private non-profit association created in 2001. It is composed of and represents the 11 Technology Centres in the region. In 2016 the centres integrated in REDIT have worked for 12.300 clients and 5.100 associated companies, developing almost 800 R&D& innovation projects for them. In total the centres have earned more than EUR 87 million. Furthermore the Network has an important technological infrastructure, with more than 100 laboratories and 20 technological observatories on market and trends.

Some of the Technological Centres of REDIT are experts in additive technologies: the Technological Institute of Metalmechanics, Wood, Furniture, and Related Products (AIDIMME); the Technological Institute of Children and Leisure's Products (AIJU); the Technological Institute of Plastics (AIMPLAS); the Textile Technological Institute (AITE); the Technological Institute for Footwear and Related Industries (INESCOP) and the Energy Technological Institute.

ACTIVITY DESCRIPTION

The University of the Basque Country (UPV/EHU), particularly the High Performance Manufacturing Group of the Dept. of Mechanical Engineering, has been investigating in additive manufacturing processes with metallic materials since 2004. During these years the Group has participated in R&D&I projects framed in all kinds of technological readiness levels, from basic research in additive manufacturing processes (TRL3) to development and set-up of hybrid machines (TRL7). The lines of research are focused on mechanical characterization of additive parts, on

numerical and thermal simulations, on process control, as well as on programming software for LMD machine paths, among others. Concerning the equipment, the Group has different working systems in two of the most common additive manufacturing technologies for metallic material such as 5 axis LMD and SLM process, as well as sensors and measuring equipment to verify manufactured parts.

CLUSTER/ ASSOCIATION

Additive & 3D Manufacturing
Technologies Association of Spain

operated by 

ACTIVITY DESCRIPTION

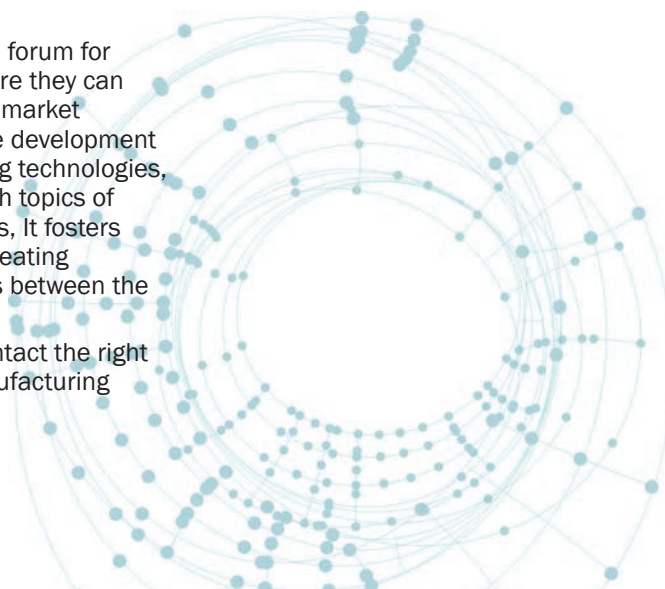

ADDIMAT, the Spanish Association of Additive Manufacturing Technologies and 3D, groups together all the players with interests in developing and promoting additive manufacturing and 3D.

ADDIMAT, is a member of AFM CLUSTER, the organisation that represents the interests of more than 480 companies of Advanced and Digital Manufacturing.

Its mission is to represent the Spanish additive manufacturing and 3D technology industry, constructing a coherent, comprehensible and differentiated image of the sector, and generating information about it.

ADDIMAT also provides a forum for member companies where they can share information about market conditions and about the development of additive manufacturing technologies, and deal, as a group, with topics of mutual interests. Besides, It fosters business cooperation, creating networking opportunities between the different market groups.

ADDIMAT can help to contact the right partner for Additive Manufacturing projects.

CLUSTER/ASSOCIATION

AEROSPACE VALLEY

118 route de Narbonne, CS 94244,
31432 Toulouse
CEDEX 4
FRANCE

www.aerospace-valley.com

Midi-Pyrénées

ACTIVITY DESCRIPTION

Competitiveness Cluster for Aeronautics, Space and Embedded Systems which relies on 6 objectives :

Objective 1: Innovation, Collaborative Projects, Networking

Objective 2: Support to SMEs, support for the development of their skills, growth and the national and international competitiveness of SMEs

Objective 3: Partner of the public authorities for the development of territories, economy and employment

Objective 4: Facilitate the sectors of the cluster with other aeronautics and

space clusters, sector committees, professional groups, etc.

Objective 5: Dissemination of technologies from aeronautics, space and ES to other sectors, in particular via interclustering

Objective 6: Put our projects and initiatives in charge of sustainable development.

CLUSTER/ASSOCIATION

HEGAN BASQUE AEROSPACE CLUSTER

Polígono Parque Tecnológico, 303
48170 Zamudio, Vizcaya
SPAIN

www.hegan.com
hegan@hegan.com

Basque Country

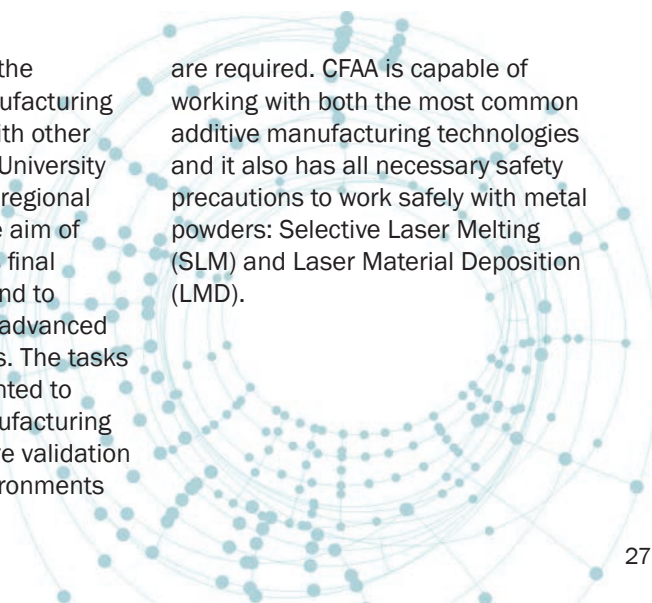

ACTIVITY DESCRIPTION

HEGAN -the Basque Aerospace Cluster- is a private, non-profit association that groups together the Basque Aeronautics and Space sector, created with the aim of fostering, promoting and stimulating the same. As a Cluster Association, its aim is to represent and promote this sector to ensure its competitiveness in short, medium and long-term through co-operation and innovation among companies and other agents, as a response to its strategic challenges in cooperation.

HEGAN is a collaborator of the Aeronautics Advanced Manufacturing Centre (CFAA in Spanish) with other aerospace companies, the University of the Basque Country and regional and local governments. The aim of the CFAA is to work towards final aeronautical applications and to generate new know-how in advanced manufacturing technologies. The tasks done at the center are oriented to work and develop the 'Manufacturing Readiness Levels' 6-7 where validation tests in representative environments

are required. CFAA is capable of working with both the most common additive manufacturing technologies and it also has all necessary safety precautions to work safely with metal powders: Selective Laser Melting (SLM) and Laser Material Deposition (LMD).

HÉLICE ANDALUSIAN EROSPACE CLUSTER

Andalusia

Calle Ing. Rafael Rubio Elola, 1
41300 La Rinconada, Sevilla
SPAIN

www.helicecluster.com
info@helicecluster.com

ACTIVITY DESCRIPTION

Since 2004 promoting the development of the Andalusian Aerospace Cluster supporting all the cluster's stakeholders, as well as to providing subcontractors with the technical resources to ensure a better integration with contractor companies.

CONSULTING

2MAtech
Matériaux et mécanique avancés

2MATECH

19 avenue Blaise Pascal
Campus des Cézeaux
CS80154663178 Aubière
FRANCE

www.2matech.fr

CONSULTING

Auvergne

ACTIVITY DESCRIPTION

2MAtech has for many years been involved in the technologies showcased in the factory of the future, and more particularly:

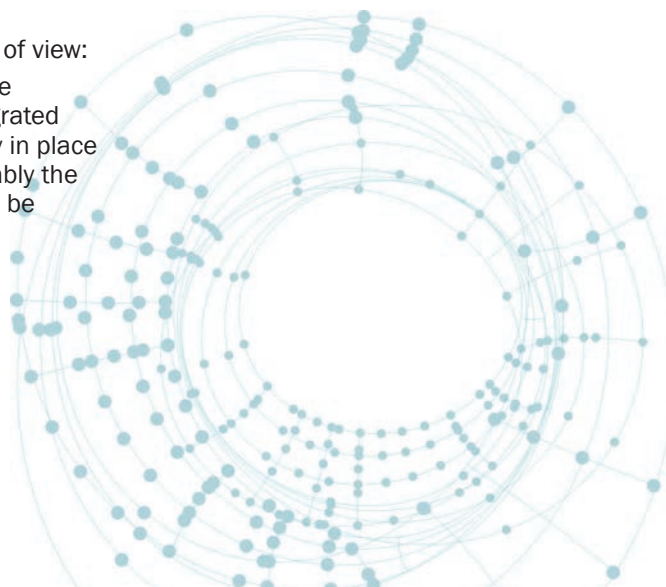

- additive manufacturing;
- the digital factory, modelling process flows and the supply chain;
- robotics, the automation of productive processes and systems.

From a point mechanical of view, we work on:

- part design;
- topological optimization;
- mechanical strength.

From an organizational point of view:

- these new means of additive manufacturing must be integrated into a production line already in place or being developed, and notably the industrial workshops need to be redesigned.

elemca
TESTS ANALYSES EXPERTISE

ELEMCA, SAS

425, rue Jean Rostand
31670 Labège
FRANCE

elemca.com

CONSULTING

Midi-Pyrénées

ACTIVITY DESCRIPTION

ELEMCA is a private laboratory, based in the French space agency (CNES, Toulouse).

We provide test, analysis & expertise services to our customers (manufacturers, integrators or end-users of MAM parts).

We help them maturing their additive technologies (powder bed, direct deposition...) & reaching higher quality grade, all along the value chain:

- ELEMCA "R&D support" = we characterize materials properties (microstructure *picture1*, internal

defects, mechanical behaviour) to help MAM manufacturers defining best process parameters

- ELEMCA "Product quality-control" = we provide NDT conformity controls (computed X-ray tomography) to assess the compliance of critical parts towards tier-1 Aerospace requirements (geometry *picture2*, material health)
- ELEMCA "Failure analysis" = we inspect & deeply characterize faulty parts (manufacturing scums or field returns) to identify failure mechanisms and root cause.

MAM EQUIPMENT AND SOLUTION PROVIDER

ACTIVITY DESCRIPTION

Designer and manufacturer of testing machines to characterize materials and structures.

ADDILAN

Eguskitza, 1
48200 Durango (Bizkaia)
SPAIN

www.addilan.com
info@addilan.com

Basque Country

ACTIVITY DESCRIPTION

ADDILAN FABRICACIÓN ADITIVA is a new company, founded by two emblematic machine tool manufacturing companies. ADDILAN designs, produces and sells high deposition rates additive manufacturing machines, based on WAAM (Wire Arc Additive Manufacturing) technologies.

Focused towards high added value components market, medium-large size components from various industries such as aeronautics, aerospace, energy and naval.

ADDILAN works with a wide range of materials such as steels, superalloys, aluminium alloys and titanium alloys. ADDILAN machines include a close loop control and an inert chamber with a loading/unloading system which assures part and environmental quality during the manufacturing process.

ADIRA METAL-FORMING SOLUTIONS S.A.

Porto and North

Rua das Lages, 67
4410-272, Vila Nova de Gaia
PORTUGAL

www.adira.pt
rhm@adira.pt

ACTIVITY DESCRIPTION

ADIRA is a Portuguese manufacturer specialized in sheet metal processing with worldwide projection of its own technology: ADIRA's Press Brakes, Shears and Laser Cutting Systems were and are still today recognized as world-leading technological equipment.

ADIRA enters the additive manufacturing market with ambitious and disruptive products, more specifically in the Additive Manufacturing of large parts.

COMPETENCIES:

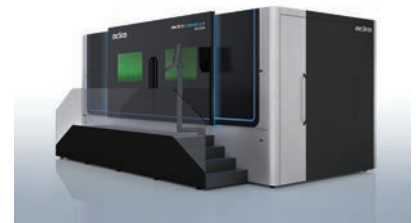

- Highly skilled and flexible workforce

brings new possibilities and the capacity for adapting existing solutions or creating new products, according to the customer's specifications.

- Given its core competencies, ADIRA is the first manufacturer in the world to position itself in the production of large-scale Metallic parts, through highly customized and disruptive concepts.

MARKETS:

Aeronautics, energy sector, automotive, mould industry, heavy duty & sheet metal industry, building & construction.

METALLIED POWDER SOLUTIONS

Basque Country

Polígono Bidaurre-Ureder Nave 10 - Ventas 45 B
20305 Irún (Gipuzkoa)
SPAIN

www.aubertduval.com

ACTIVITY DESCRIPTION

Metallied Powder Solutions belongs to the Eramet Group alloys division. The Eramet Group comprises the activities of Aubert & Duval and Erasteel.

Metallied manufactures metallic alloys in the form of powder for the Additive Manufacturing markets, mainly aeronautics and energy. The alloys manufactured are Ni, Co and Fe base, being able to supply homogeneous batches of up to 1 ton.

Metallied is EN 9100 and ISO 9001 certified and supplies its products to the main players in the mentioned markets.

.I. Etxesaga, s/n - Apdo. 35
20720 Azkoitia (Gipuzkoa)
SPAIN

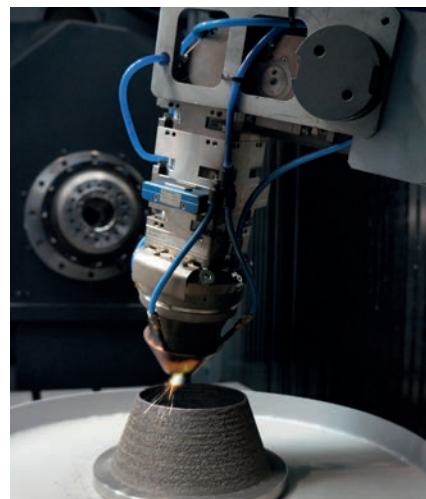

www.ibarmia.com
innovate@ibarmia.com

Basque Country

ACTIVITY DESCRIPTION

IBARMIA, a Spanish company with more than 60 years of experience in the machine tool business, has developed its new ZVH ADD+PROCESS hybrid machining centre model which combines additive manufacturing with metal cutting machining capabilities (milling, drilling, boring and/or turning operations). This model can manufacture a wide range of large size pieces.

MAM EQUIPMENT AND SOLUTION PROVIDER

PRINTSKY

7 Albert Durand
31700 Blagnac
FRANCE

Midi-Pyrénées

ACTIVITY DESCRIPTION

Joint venture between AddUp (ALM machines Manufacturer) and SOGECLAIR (Industrial Aerospace) dedicated to the development of future industrial production projects in the field of additive metal manufacturing (Laser powder and Electron Beam) for the Aerospace industries.

The PrintSky platform offer a modular solution that can: Aid the selection of parts eligible for additive manufacture ("creative event"), Construct a business case according to the material and the selected technology most suited to the customer's need

(Laser powder or electron beam, and potentially other technologies ...), optimize and customize the design including Topological Optimization, support qualification and certification (DOA, POA for aeronautic), manufacture prototypes and pre-production sample for proof of concept (LBM & EBM) and deliver all the parameters and know-how necessary for the launch of the series production for the future operators.

Aquitaine

ACTIVITY DESCRIPTION

Toyal group is a global producer of aluminium based products. The company was founded in 1931 and is today one of the major producers of aluminium powders, aluminium based alloy powders, aluminium effect pigments, aluminium foils and aluminium nitride. Toyal serves various markets such as Automotive, Packaging, Cosmetics, Thermal Management, Electronics, Photovoltaics or Additive Manufacturing. Toyal, as a global actor, employs 2500 people located across 11 sites in Japan, China, India, the USA and France.

For the AM activity, Toyal provides high quality Al alloy powders such as the classical AlSi12, AlSi10Mg or AlSi7Mg0.6. Toyal also produces and delivers Scalmetalloy® powders. Taylor-made compositions can also be produced on demand (main alloying elements: Si, Mg, Mn, Sc, Cu, Zn, Zr, etc.)

Al alloy wires can also be available through collaborations with its sister company Nikkei Sangyo.

ZAYER

Portal de Bergara, 7
01013 Vitoria- Gasteiz (Araba)
SPAIN

www.zayer.com

zayer@zayer.es

Basque Country

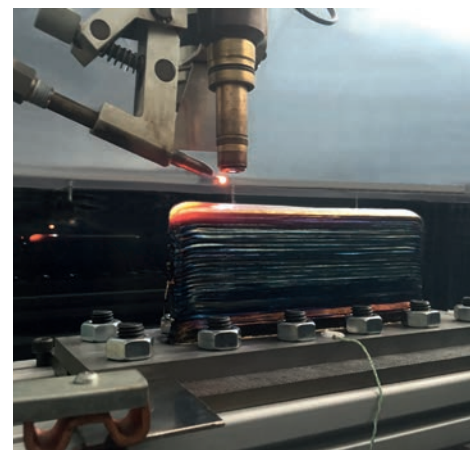

ACTIVITY DESCRIPTION

Zayer, with over 60 years experience in the manufacture of milling machines and machining centers, offers a wide variety of bed type, moving column, bridge type and gantry models. Machines specifically designed for the manufacture of dies, molds, the aeronautical, aerospace and wind power industry and general machining purposes.

Furthermore, Zayer keeps research lines about different hybrid machines configurations that combine additive and subtractive technology, meant for metallic hybridization, reinforcement

or recovery of valuable small pieces in multiple alloys. These solutions are based on the combination of direct additive fusing technologies with deburring in the same machine

ACTIVITY DESCRIPTION

COMPANY:

BBE is a company dedicated to develop engineering solutions, based on recent tools and technologies, strongly dedicated to additive manufacturing, solid relations with the customers are generated, creating communication strategies that allow to monetize each project. The dedication, accuracy and quality are considered driving guidelines of its growth, strengthening the propensity to continuous improvement. The main areas of focus are the development, analysis and design, presenting as fundamental skills the realization of Computer Aided

Engineering (CAE) as fundamental skills, Design and Redesign of products, prototype manufacturing molds, metal and plastic sintering, thermography, among many other fundamental services to the industry in which operates. The clients diversity allowed BBE to enlarge its area of operation, namely on the development of grippers and automations, strengthening its activity. With a team of multidisciplinary professionals from different areas of Engineering, such as Mechanical, Biomechanic, Industrial, Electrical and Computing, reflecting its performance in a flexible approach to

the challenges posed by its customers.

COMPETENCIES:

Design and Redesign of products;
prototype manufacturing molds;
metal and Additive manufacturing;
thermography.

ACTIVITY DESCRIPTION

Component failure is often related to residual tensile stress induced during manufacture and certain operating conditions. The controlled shot peening process is a cost effective and practical method of replacing tensile stress with beneficial compressive stress which is proven to prevent failures due to:

- Metal fatigue
- Corrosion fatigue
- Stress corrosion cracking
- Intergranular corrosion
- Fretting
- Surface roughness

- Internal porosity
- Galling
- Spalling
- Wear

EGILE CORPORATION
